Buhler Sortex

Securing the food chain

Buhler Sortex is a market leader in the provision of sorting solutions to the food and non-food processing industries. First Choice Facilities (FCF) was appointed to provide essential, integrated fire and security solutions to protect the company's office and factory areas.

FCF installed a four loop analogue fire alarm system consisting of approximately 300 devices, and a public addressable system covering the same office and factory areas

across eight separate zones, comprising 70 speakers. FCF also installed a 20 camera CCTV system; a fully networked access control/intercom system; and an intruder alarm system.

Offering integrated packages of supply across nine disciplines, and a flexible pricing structure that brings savings as additional products are added, FCF was able to provide Buhler Sortex with a highly tailored and cost effective programme of works.

Bio Products Laboratory

Science in safety

With wide experience in supplying Fire, Security and Electrical Testing services to a diverse range of commercial premises, including manufacturing and scientific facilities, FCF was well placed to meet the maintenance needs of the Bio Products Laboratory (BPL) complex in Elstree.

BPL is a not-for-profit organisation, wholly owned by the British Government. Its research, development, and manufacturing expertise delivers high quality plasma-derived

products to a global market. FCF is experienced in meeting the rigorous service agreements required by public bodies, and now maintains the Fire Alarms and Fire Extinguishers across all BPL sites.

FCF's multi-skilled engineers are able to service multiple products on a single visit, resulting in a highly competitive price package for BPL, with services delivered to the highest industry standards.

Portakabin

The right fit

From its quiet beginnings in the 1940s, Portakabin has grown to become a widely recognised brand, its name synonymous with relocatable and modular on-site accommodation.

Far from supplying just makeshift temporary solutions, Portakabin's extensive manufacturing base in York now produces highly sophisticated modules with diverse applications. Like Portakabin, FCF aims to supply its customers with tailored solutions to meet specific needs. FCF installs Fire Alarms

and Intruder Alarms at a range of Portakabin sites, particularly Government buildings. With multi-skilled engineers and flexible pricing structures, FCF is able to offer Portakabin a tailored and integrated package of supply at a competitive price.

All FCF's design, installation and maintenance services are delivered by highly trained engineers supported by the latest technology to ensure reliability, efficiency and accountability.
