

Grantside Developments

Looking after lonely offices

First Choice Facilities (FCF) now provides periodic maintenance and call out facilities for all the fire detection systems installed at Grantside Development's unoccupied office complexes

The task required is to provide quarterly maintenance visits to test and inspect the fire systems and when required provide remedial works to ISO9002 standards. FCF has looked after these sites for the last 4 years

and has been able to provide advice and technical expertise for the range of equipment installed on these sites.

Richard Waddington, Facilities Manager for Grantside Developments says "We use FCF to carry out the servicing of our fire detection systems as they provide us with a service that we feel confident with and we know that their staff are experienced and the company operates in a professional manner".

HMV

Orchestrating fire safety solutions for HMV

The brief from HMV to FCF was clear – to provide fire safety services to meet the needs of the UK's leading chain of music stores. With its head office in London and 146 stores throughout the UK, HMV needed a reputable supplier that could be relied on.

John Ashton, Property Development Manager with HMV has experienced first-hand the benefits of working with an independent supplier of fire and security services and equipment.

"My rationale for choosing FCF was based on their commitment to service levels – one of the things I value most about working with the FCF team is their ability to identify, understand and quickly resolve important issues. I have the confidence that I can pick up the phone to them and will always deal with someone who is able to help me achieve my aims".

NG Bailey & Co Limited

Networking challenges overcome at Cobalt

FCF has been involved with NG Bailey at the Cobalt Business Park site providing fire detection systems throughout all but one office complex.

The brief for these sites was for the installation of complete fire detection systems throughout each office block with some requiring the systems to be networked together to provide evacuation facilities across adjoining blocks. FCF has now been contracted by NG Bailey to provide the fire detection systems on another four office

blocks again with network capabilities at the above business park.

Andy Hodson, NG Bailey Project Manager at Cobalt Business Park said "We have a good working relationship with FCF. They provide us with a good quality product and are extremely knowledgeable in their approach. Whilst all our contracts are driven by cost, we are happy to continue using FCF on future projects as they provide the sort of service we expect from our sub-contractors together with the competitive edge to enable us to continue to win further orders".
